## **DETAILED ACTION**

### ***Election/Restrictions***

Applicant's election with traverse of group III in the reply filed on 9/20/05 is acknowledged. The traversal is on the ground(s) that, no grounds were given. This is not found persuasive.

The requirement is still deemed proper and is therefore made FINAL.

Claims 1-9 & 14-20 are withdrawn from further consideration pursuant to 37 CFR 1.142(b), as being drawn to nonelected inventions, there being no allowable generic or linking claim. Applicant timely traversed the restriction (election) requirement in the reply filed on 9/20/05.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 10-12 are rejected under 35 U.S.C. 102(b) as being anticipated by Gordish et al. (USPN 5,233,160).

Gordish et al. discloses a cored electrode having a steel sheath. The filler within the sheath contains sodium oxide and other materials. Additionally, the filler may contain magnesium oxide. Sodium oxide is present in the range of 0.8 to 3.2%. Other slag forming constituents are aluminum oxide, calcium fluoride, metallic silicon, iron

Art Unit: 1725

oxides and metallic iron. Typically flux formulations are 13.5 to 16.5 %. Aluminum oxide ranges up to 1.4%, calcium fluoride ranges up to 1.2%, iron oxide up to 0.6%, metallic silicon up to 8.5% and metallic iron up to 14.7%. (abstract, figures, cols. 2, 11-14)

### ***Allowable Subject Matter***

Claim 13 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the prior art does not teach non-metallic compounds  $\text{Al}_2\text{O}_3$  and  $\text{Na}_2\text{O}_3$  with the total percentage of 14%.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See US PTO-892.
